

EXHAUST AIR HEAT PUMP

This system has an exhaust air heat pump fitted with an inverter compressor. It utilizes the energy from the stale air extracted from sanitary areas to heat domestic hot water

Advantages

Up to 10% reduction in heating, thanks to mechanically controlled ventilation

Huge savings on heating hot water.

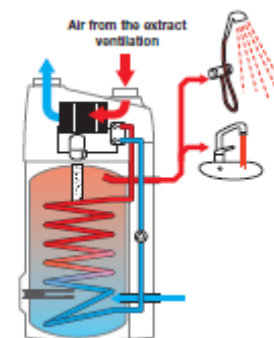

COP 2.5 up to 3.5 depending on airflow (under assessment with SAP appendix Q)

Easy to install

Single system provides 2 functions

'Plug and Play' product

Built-in 200L hot water tank suitable for pressurized system

Model	Code	Price £
Without fan	060-11023192	2686.64
With fan	060-11023191	2768.08
